RE: problem with search request for SN 09/851,494

OK, let's modify the search. I need a search of nucleotides 5500 to 7000 and 9000 to 9200 of SEQ ID NO:1, which contain specifically claimed diagnostic mutations outside of a coding region, as well as nucleotides 400 to 1500 of SEQ ID NO:2, which appears to be a coding region within SEQ ID NO:1 and which contains seven additional diagnostic mutations. If this presents a problem, I can divide SEQ ID NO:2 into fragments containing the specifically recited mutations.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CO
                                                                                                                                                                       containt to AAPT41/1/ encode the human membrane associated proteins (MEMAP) given in AAB74655 to AAB74731. MEWAPS have cytostatic.

antianteriosclerotic activities, which can be used in gene therapy.

Contining and agonist of MEMAPS can be used to reat a disease or condition associated with decreased expression of functional MEMAP and antagonists of MEMAPs are used to treat a disease or condition associated with decreased expression of functional MEMAP and antagonists of MEMAP are used to treat a disease or condition associated with overexpression of functional MEMAP. These disorders include cell proliferative, autoimmune/inflammatory, neurological and gastrointestinal proliferative, autoimmune/inflammatory, neurological and gastrointestinal proliferative, autoimmune/inflammatory, neurological and gastrointestinal disorders. Specific examples of these disorders included cancer, inflammaton, atheroselerosis, epilepsy and diarrhoea. MEMAP proteins can be used to screen for compounds which specifically building antibodies, oligomicleotides, otherwise and small molecules. MEMAP polymucleotides can be used to prepare transgenic disease. Anti-MEMAP protein and can be used to prepare transgenic detection of MEMAP protein and can be used as antagonists to treat or prevent a disorder associated with MEMAP. Polymucleotides encoding MEMAP. Can be expression of MEMAP to treat or prevent a disorder associated with genetic abnormalities with respect with MEMAP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     treating central nervous system disorders such as neurodegenerative disorders for example Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, progressive supranuchear palsy, epilepsy, Creuzfeldt-Jakob disease, AlDS-related dementia, familial infantile convulsions, paroxysmal choreoathetosis, psychiatric disorders such as depression, anxiety, schizophrenia, psychoses, mania or phobic disorders, learning or memory disorders such as amnesia, age-related memory loss, or a neurological disorders such as amnesia, age-related are also useful to treat a pain disorder. The present sequence represents the human TLCC-2 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel transient receptor potential (TRP)-like calcium Channel, designated TLGC-2 and polynucleorides encoding the TLGC-2. TLGC-2 can be expressed by standard recombinant methodology. The TLGC-2 polypeptide, polynucleotides and medulators are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Transient receptor potential like calcium channel; TRP; TLCC-2; human; neuroprotective; analgesic; nootropic; antiparkinsonian; antidepressant; cerebroprotective; anxiolytic; antimanic; anticonvulsant; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid designated TLCC-2 encodes a transient receptor potential-like calcium channel and is useful to diagnose and treat pain disorders and central nervous system neurodegenerative and neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MTAPAGPRGSETERLLIPNPGYGTQAGPSPAPPTPPEEEDLRRRLKYFFMSPCDKFRAKG

                                             The present invention relates to the protein and coding sequences of human transient receptor potential (TRP)-like calcium channel protein-2 (TLC-2). The sequences can be used in the treatment of TLC-2 related disorders, including central nervous system disorders such as Alzheimer's, Parkinson's and Huntington's diseases, multiple sclerosis, Gilles de la Tourette's syndrome, autonomic function disorders, learning or memory disorders, pain disorders and disorders of cellular proliferation, including cancer. The present sequence is the TLCC-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune chamber thyroiditis, diabetes mellitus, Crohn's disease, miltiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial isohaemias; ed, wound healing; (e) neurological diseases e.g. cerebral anoxia and epidensy; and (f) infectious diseases such as viral, bacterial, fungal Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. and parasitic infections.

The polynucleotide sequences given in AAA39052 to AAA39088 encode the human secreted proteins given in AAB08891 to AAB08984. The human secreted proteins can have activities based on the tissues and cells they are expressed in. Examples of the activities are: cytostatic, and they are anti-proliferative; immunosuppressive, antibacterial, and vulnerary. The secreted proteins and their related polynucleotide sequences are useful for diagnostic and therapeutic methods useful for diagnostic and therapeutic methods useful for diagnostic and treating

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide comprises one of the complementary strand of a polynucleotide which comprises one of oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5-end of sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'end sequence. Where the oligonucleotide comprises a 1'end sequence, where the combination of the 5'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining the cDNAs assily whences, and any appectation and cDNAs administration of the full-le
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             148

This invention describes novel polypeptides, termed NOVX which have antidiabetic, antiarteriosclerotic, anorectic, metabolic, antimicrobial, entidiabetic, antiparkinsonian, antilipaemic, cytostatic, nootropic, cardiant and immunomodulatory activity. The polypeptide and any cardiant and immunomodulatory activity. The polypeptide and any contibodies generated from it are useful in the manufacture of a medicament for treating a syndrome associated with a human disease.

Selected from a pathology associated with the NOVX polypeptide. Fragments and portions of the polymucleotides encoding NOVX polypeptides. Fragments and portions of the polymucleotides encoding NOVX polypeptides are useful to the map the location of NOVX genes on a chromosome, to identify crestriction fragment length polymorphism (RFLP), and are useful to restriction fragment length polymorphism (RFLP), and are useful to prepare polymerase chain reaction primers. The products of the invention can be used in gene therapy and for treating cardiomyopathy, metabolic disorders, disease, anorexia, neurodegenerative disorders, Alebaners, and various disease, anorexia, neurodegenerative disorders, Alebaners, and various cancexia, metabolic distributabances associated with obesity, metabolic syndrome X and wasting disorders associated with chronic diseases and various cancers. ABU12041-ABU12086 represent the polypeptide fragments concoded by the NOVX polynucleotides represented in ABX55261-ABX55306.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8

WPI; 2003-046862/04. N-PSDB; ABX56274 New isolated NOVX polypeptide useful for treating cardiomyopathy, atherosclerosis, metabolic disorders, diabetes, obssity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease and

Claim 1; Page 113; 425pp; English

antidiabetic, antiarteriosclerofic, anorectic, metabolic, antimicrobial, neuroprotective, antiparkinsonian, antilipaemic, cytostatic, nootropic, cardiant and immunomodulatory activity. The polypeptide and any antibodies generated from it are useful in the manufacture of a medicament for treating a syndrome associated with a human disease selected from a pathology associated with the NoVX polypeptide. Fragments and portions of the polymclectides encoding NOVX polypeptides are useful to map the location of NOVX genes on a chromosome, to identify restriction fragment length polymorphism (RFLP), and are useful to prepare polymerase chain reaction primers. The products of the invention can be used in gene therapy and for treating cardiomyopathy, metabolic disorders, diabetes, albarosclerosis, obsesty, infectious disease, anorexa, immuno disorders, Alzheimer's disease, anorexa, immuno disorders, Alzheimer's disease, parkinson's ώ ώ 97 NTIAFRHLFLLGYSDGADDTF--AAYTREQLYQALFHAVDQYLALPDVSLGRYAYVRGGG 154 152 275 LETQAHIQECKHPSVFQHGDNS--FRLLFDVVVILTCSLSFLLCARSLLRGFLLQNEFVG 332 metabolic 208 SSFFR---LEFYRLLQVBISFHLKGIDLQTIHSRELPDCYVFQNTIIFDNKAHSGKIKIY 264 452 384 572 96 96 558 disease, immune disorders, haematopoietic disorders, and various dyslipidaemias, metabolic disturbances associated with obesity, metabol syndrome X and wasting disorders associated with chronic diseases and various cancers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121 WANGSALALCORYTHRGHVDPANDTPDIDPRVYTDCIQVDPPDRPPDIPSEDLDFLDGSA 180
                                                                                                                                                                                                                                             isolated from human, mirine and rat skin cell libraries. The sequences can be used in the development of therapeutic agents useful in the treatment of skin disease; including skin wounds, cancer, growth defects, developmental defects and inflammatory diseases. The proteins have important roles in the induction of hair growth, cell proliferation and cell-cell interaction, in maintaining tissue integrity, in wound healing and in modulating immune responses. The present sequence is a polypeptide of the invention.

                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or mare genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical dargs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01861-0-ABL30512).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2 TAPAGPRGSETERLLTPNPGYGTQAGPSPAPPT-----PPE------EEDLRRRL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags of for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving antibodies against it, detecting or (II). (II) is useful for generating antibodies against it, detecting or ganditating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful for treating associaters involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutuations or responsible for genetic disorders or other traits to assess biodiversity and in the polypeptide and polymucleotide sequences have applications in the polypeptide and polymucleotide sequences have applications in the polypeptide and polymucleotides of the context o

The present sequence representing human TANGO 480 is isolated from CDNA clone jthka173a09 from a human keratinocyte cDNA library.

TANGO 480 is 1 of 4 movel human transmembrane proteins which also includes TANGO 315 (AAU00499-AAU00503) (AAU00500-AAU00501),

TANGO 417 (AAU00502). The nucleic acids encoding these proteins an adulating agents in regulating a variety of cellular processes and can be used to express the proteins in a host cell in gene therapy applications. Antisense nucleic acids are also described. Signostic assays can be used to detect genetic alterations in the TANGO nucleic acids and to identify compounds that bind to or modulate activity of nucleic acids and to identify compounds that bind to or modulate activity contint protein levels in tissue as a clinical testing procedure.

TANGO 480 nucleic acids and proteins may be used to diagnose, treat and monitor keratinocyte disorders e.g. squamous cell carcinoma, keratitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 TLLWWGVIRYLFFHWYNILIATLRVALPSWRRCCCVAVIXLGYCFCGWIVLGXYHVK 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital, (b) immune disorders e.g. Addison's disease, allergies, autoimmune historiation and preventics and ulcerative disease, multiple sclerosis, rheumatonia architis and ulcerative colitis, (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                          Novel 1405 isolated polypeptides, useful for diagnosis, treatment and prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            334 MWRQRGRVISLWERLEFVNGWYILLVTSDVLTISGTIMKIGIEAKNLASYDVCSILLGTS
